Creating Critically Thinking Educational Leaders With Courage, Knowledge and Skills to Lead Tomorrow’s Schools Today
P. Sherblom, Ph.D.

Abstract
School leaders need to possess critical thinking skills to identify and effectively address systemic school problems. Educational leadership programs fail their candidates when they do not develop their ability to connect and apply theory, research, and practice. If critical thinking skills can be mastered then is it reasonable to expect educational leaders to be successful and model the NPBEA Educational Leadership Policy Standards.
