

## Mac OS X 10.5 and 10.6: WPA2 Wireless Setup

1. Click **AirPort** icon on the toolbar

2. Select **Wesley\_Student**

The network *Wesley\_Student* requires a password window displays:

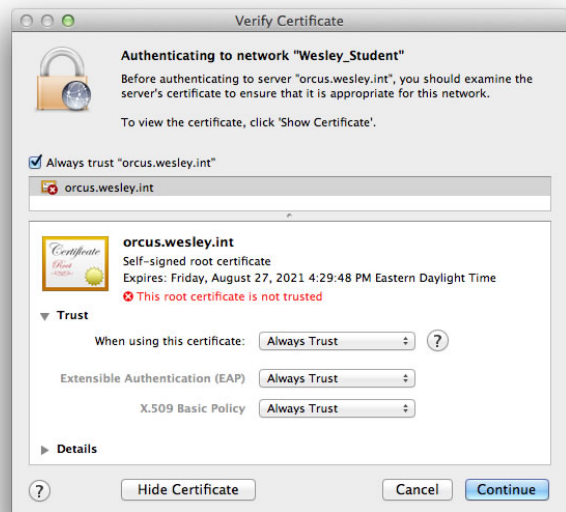

3. Type your **Wesley Email Username (without the "@email.wesley.edu")** and **Password** in the spaces provided.
4. Click **OK**

The *Verify Certificate* window displays:

5. Click **Show Certificate**

6. Click arrow next to **Always Trust**

**Note:** This will automatically reset the **Extensible Authentication (EAP)** and **X.509 Basic Policy** options to **Always Trust**.

7. Click **Continue**

**\*Note** - You may be prompted to enter administrative credentials on your Mac to make changes to the certificate trust settings.

You are now accessing Wesley College's secure wireless network using WPA2 Enterprise. To verify connection, open your preferred browser and access the web.

**Note: Each time you restart your computer, you may receive a prompt to enter your user name and password.**
